RE: Reference for Calder Projects Services

To whom it may concern,

Calder Projects Services was an Engineering sub consultant to AARC Pty Ltd for the Silver Hill Concept Study completed in March 2008.

This green fields copper gold project incorporated a 1.5 Mtpa grinding and flotation concentrator, oxidative leach, SXEW and CIL circuits. Infrastructure requirements entailed the development of conceptual designs and costing for, site access, on site accommodation, water and power supply systems.

Calder's contribution centred on conceptual site, plant and infrastructure layout design and capital cost estimating.

Their work was completed on time and under budget and when incorporated into the overall Study Report was well received by the Client.

AARC has been satisfied with the manner that Calder undertook their tasks and would have no hesitation in using their services again on similar work.

Yours faithfully,

Rodger Bonney
